PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building scalable web applications using React.js, Node.js, FastAPI, and PostgreSQL. Skilled in REST API design, role-based access control (RBAC), multi-tenant architecture, and database optimization. Experienced in machine learning model development using CNN and YOLO for real-time computer vision applications. Strong problem-solving skills with a solid foundation in data structures and algorithms. Passionate about writing clean, maintainable code in Agile team environments.

SKILLS

Languages: Python, Java, JavaScript, TypeScript

Frontend: React.js, HTML5, CSS3

Backend: Node.js, Express.js, FastAPI, REST API Development, RBAC, Multi-tenant Architecture

Databases: PostgreSQL, MongoDB, SQL, Database Query Optimization

ML / AI: CNN, YOLO, XGBoost, OpenCV, Scikit-learn, Model Training & Evaluation

Tools & DevOps: Git, GitHub, Docker, Postman, VS Code, Linux

EXPERIENCE

Edsols Innovations | Junior Developer

June 2025 – Present

- Designed and developed 20+ RESTful APIs using FastAPI and Node.js for a production of healthcare projects
- Architected multi-tenant backend with role-based access control (RBAC), reducing unauthorized access incidents by enforcing granular permission layers and worked on both authorization and authentication techniques
- Integrated and worked on both PostgreSQL and MongoDB with optimized schema design for scalable and secure data management across multiple tenants

Glowlogics Solutions | AI Project Developer Intern

Dec 2024 – Apr 2025

- Built an AI-based image classification system using Convolutional Neural Networks (CNN), achieving 92% accuracy on fruit and vegetable classification
- Improved model accuracy by 18% through data augmentation, hyperparameter tuning, and preprocessing techniques
- Trained and evaluated models on 5,000+ labeled images using Scikit-learn and OpenCV

PROJECTS

HMS – Multi-Tenant Hospital Management System

[🔗 Demo](#)

Tech: React.js, Node.js, MongoDB, RBAC

- Architected and developed a multi-tenant Hospital Management System (HMS) from scratch, covering frontend, backend, and database layers within a tight project deadline
- Built a hospital provisioning system with unique slug-based multi-tenancy, supporting Super Admin, Master Admin, Consultant, Coordinator, and Therapist roles with granular RBAC
- Developed an automated referral and case-assignment workflow (Consultant → Coordinator → Therapist) with round-robin, capacity-based routing across multiple hospital tenants
- Integrated clinical screening tools with PDF report generation and automated email delivery via AWS SES

Therapyware – Healthcare EMR System

[🔗 Demo](#)

Tech: React.js, FastAPI, PostgreSQL, RBAC

- Built a full-stack EMR system managing 200+ patient records and therapy session workflows with real-time updates
- Implemented role-based access control (RBAC) and multi-tenant architecture supporting 4 distinct user roles (admin, doctor, therapist, and receptionist)
- Designed and documented 20+ REST APIs enabling seamless frontend-backend integration with Postman-tested endpoints

LeetCode Management System

[🔗 Demo](#)

Tech: React.js, Node.js, MongoDB

- Developed a full-stack platform tracking coding performance and leaderboard rankings of students
- Implemented MongoDB aggregation pipelines reducing leaderboard query time by 40% over naive implementations
- Implemented RBAC and Built a dynamic, responsive UI with real-time performance insights and trend visualization using React.js

ACHIEVEMENTS

- 1st Place** – Full-stack Development Track, Techno-Cultural Fest 2025, KEC (200+ competing teams)
- Top 10 Finalist** – HCS Coding Competition 2024 (150+ participants)
- 3rd Place** – Paper Presentation, Newell's 2023
- Joint Secretary**, AI Association, KEC (2023–2025) – organized 10+ technical events and workshops for 300+ students
